Washington, Nov 17 (ANI): Being empathetic is all in the genes, say researchers who have found a genetic variation linked to a person's ability to infer the mental state of others.

The researchers from Oregon State [University](#) and University of California, Berkeley have found a variation in the hormone/neurotransmitter oxytocin's receptor that might explain how empathetic a human is, and how that person reacts to stress.

Sarina Rodrigues, an assistant professor of psychology at Oregon State University, revealed that
